

## SECURE ELECTRONICS RECYCLING CONTAINER

The innovative Defender 65 E-Recycling cart is the perfect way to collect electronics for secure recycling. Cell phones, USB sticks and media drives can all contain valuable information on them that must be effectively destroyed to prevent data leaks. Additionally, these devices and media contain raw materials that can be reclaimed and recycled. Proper disposal of these devices ensures confidentiality and sustainability.

With 3 hasps and padlocks, this cart can either be keyed alike for convenience, or separately so no single person can access the contents. Combined with the E-recycling opening with anti-retrieval tabs, the Defender 65G E-Recycling is the premiere solution for secure electronics collection.
